

HOCHSEILGARTEN ISARWINKEL GMBH RAIFFEISENSTR. 6 D-83661 LENGGRIES

## Information for teachers, parents, legal guardians and group leads

In the high ropes course “Isarwinkel”, we use a safety system by the company Bornack, which is Europe’s leading manufacturer for safety systems at heights.

This system allows all climbers in the course to be attached to the lifeline at all times. The SSB SAFE LINK system ensures reliably, that the climber cannot detach himself / herself from the lifeline. Only one of the two communicating carabiners can be opened at any one time. This prevents that climbers accidentally open both carabiners at the same time. Hence, especially children, kids and school classes can be supervised easily and safely.

Please make your child / your group aware that it is of utmost importance to follow the rules in the high ropes course. Those who follow the rules will definitely have a lot of fun.

After the initial safety instruction, visitors will climb without direct supervision of a guide. This means, that guides are on site and oversee the operation, however, it is not required to provide a complete and continuous supervision or observation.

Our guides are always available on call to answer any question or, if need be, to reach out to the climber and give support or help.

School classes or similar groups will be divided into smaller groups during the initial safety instruction. Within those smaller groups, people need to check up on each other and offer support.
